

Effective Broadleaf Weed Control at Lower Rates

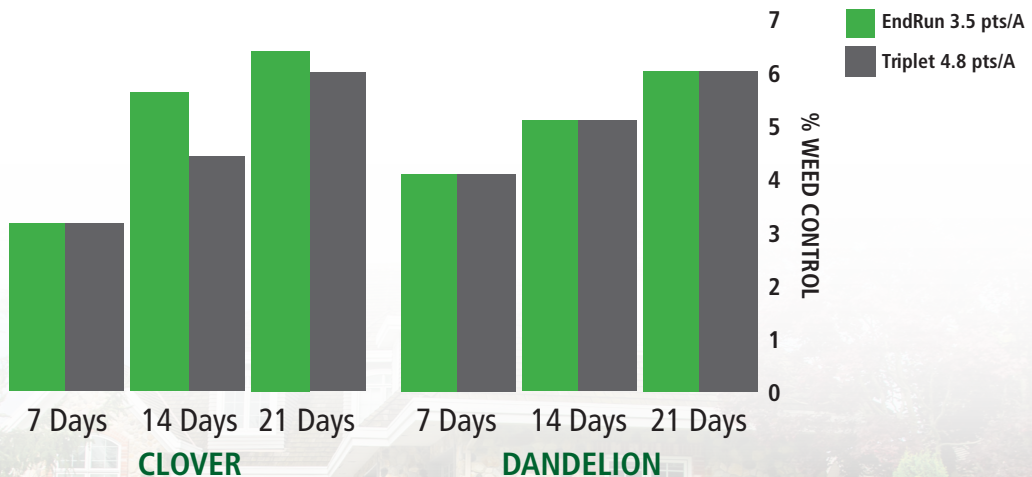

EndRun is an adjuvant-loaded, three-way herbicide containing 2,4-D, MCPP and dicamba. The product is designed to give you increased performance at a lower rate and spray volume over typical three-way herbicides. Compared to conventional products, EndRun allows you to achieve highly effective broadleaf weed control with less herbicide used per acre.

EndRun controls dandelion, clover, knotweed, henbit, chickweed, plantain, spurge and many other broadleaf weeds. It's co-formulated adjuvant system improves plant uptake, increases spreading and wetting on leaf surfaces and reduces spray bounce for a more accurate application. Contact your local Helena representative to achieve effective broadleaf weed control at lower rates with EndRun.

- Broadleaf weed control in turf at lower rates than similar products
- Rapidly absorbed by weeds
- Contains a co-formulated adjuvant system
