

# Improved Efficacy & Broadleaf Weed Control

Using Dimension® 2EW Specialty Herbicide with Grounded® improves the efficacy of pre & post-emergent herbicide applications.

Dimension® Specialty Herbicide provides pre- and early post-emergent control of crabgrass, along with pre-emergent control of more than 45 other grassy and broadleaf weed species in golf, nursery and T&O applications. When used with soil applied herbicides, Grounded, a deposition aid, can positively affect spray applications. Grounded improves herbicide applications by modifying the wetting and deposition characteristics of the spray solution resulting in a more even and uniform spray deposit.

- Over 45 grassy & broadleaf weeds controlled
- Can be used over the top of landscape, & container & field grown ornamentals
- Pre & post-emergent control means more time to make applications
- One application can last a full 120 days with a split application option

- Keeps pre-emergent herbicides in the target area for optimal weed control
- Can prevent leaching of pesticides through soil profile
- Improves droplet size uniformity
- Reduces evaporation & drift
