

IMPROVES TURF GREEN-UP & RECOVERY AFTER AERATION

KickStand DG + Fe is a greens grade product that can be applied to turf, ornamentals, trees, vines and garden landscaping for quick, visual greening and additional agronomic benefits. It enhances shoot growth and density and increases carbohydrate reserves in turf, which results in better tolerance to wear and weather extremes.

KickStand DG + Fe flows smoothly with low-dust qualities. It provides a quality source of iron to help enhance turf's green color. In heavy soils, KickStand DG + Fe improves water movement. It also improves soil moisture retention and CEC in sandy soils, while improving fertilizer efficiency by reducing leaching.

KickStand DG+ Fe contains Helena's **Asset Formulation Technology (AFT)**, which improves the performance of soil-applied products and their impact on plant health. AFT helps promote a stronger, healthier root system and enhances utilization of nutrients and soil moisture. This helps minimize stresses after aeration as well as throughout the growing season

Product Highlights

- Provides a quick, visual green-up
- Enhances shoot & root growth
- Sized for use on golf greens
- Improves carbohydrate reserves
- Increases wear & weather tolerance
- Easy to handle & apply
