

ENERGIZE YOUR SOIL. ELEVATE YOUR TURF.

Deliver humic compounds directly to the soil and make the most of soil-applied nutrients with Resurge™ Professional.

Humic substances help mobilize nutrients from the soil to the plant and have been proven to enhance plant growth. Unfortunately, soils lose humic substances over time, making it harder for turf to take up vital nutrients in the soil.

Resurge Professional is a low-dust granule with humic compounds engineered to improve nutrient efficiency and strengthen plant growth with fast release of the active ingredient. It contains the highest concentration of humic acids available from specific, high-quality ore sources. The low-dust granule breaks down quickly in the soil and keeps nutrients where they belong. It also improves soil quality and health for stronger, denser, higher-quality turf.

Resurge Professional provides a clean application. The consistent sizing ensures better flowability through the spreader, reduces bridging, and provides even distribution across the treated area. No other humic source provides the high-level of activity, consistency and reliability as Resurge Professional.

Energize your soil, and elevate your turf with Resurge Professional. For more information, contact your local Helena representative or authorized dealer.

PRODUCT HIGHLIGHTS

- **Low-dust granule with the highest concentration of humic acids from specific, high-quality ore sources**
- **Uniform shape & size for even distribution in the fertilizer blend & across the treated area**
- **Helps improve soil quality & health**
- **Reduces leaching & improves fertilizer efficiency for stronger, denser, higher-quality turf**
- **Better flowability & reduced bridging through the spreader**
- **Increased solubility to move into the soil profile faster**

Resurge Professional is a Quality Food Source For Soil Microbes & Helps Reduce Fertilizer Leachates
